**SPACETIME PUBLICLY RELEASES VERSION 1.0 OF ACCLAIMED 3-D SEARCH**  
*Next Dimension of Web Browsing Ready for PrimeTime*

**LAS VEGAS, Jan. 7, 2008** – SpaceTime (<http://www.spacetime.com>) today announced the worldwide availability of SpaceTime 1.0 at the 2008 International Consumer Electronics Show. SpaceTime, a free consumer PC application, allows you to search, browse, shop, read news, watch videos and more, all in an unlimited 3-D environment.

“With SpaceTime, we are bringing another dimension to exploring the Internet,” said SpaceTime CEO Edward Bakhash. “We hope to dramatically change the way people use the Web by adding dynamic interactivity and new, intuitive tools for discovering information.”

Through its beta testing in 2007, SpaceTime collected valuable feedback from its users to develop popular and innovative features such as:

- **3-D Search** – Conduct searches on Google, Yahoo!, eBay, Amazon, RSS feeds, Flickr, YouTube and more right from the SpaceTime interface, which loads your search results as a stack of separate pages. Unlike ordinary searches, which return a list of links that you have to click one at a time, SpaceTime simultaneously loads 10 results at a time, each in its own window. Users can then quickly and easily flip through the results, re-arrange the pages or manipulate them as desired.
- **Cinematic View** – Check out YouTube’s most popular clips of the day right from SpaceTime’s interface which stacks the videos on a reel. It can maximize to full-screen and automatically pause when you change the channel.
- **SpaceTime Zoom** – When using Google or Yahoo! Search, the first few pages appear in a stack with your search terms already highlighted on each page. Use the zoom feature to jump to a close-up view of each instance.
- **Navigator** – Zoom, pan, and flip through your results using the sidebar control panel.
- **Sleek New Interface and Increased Usability** – SpaceTime is easy on the eyes and easier to navigate with keyboard shortcuts, automatically-loaded favorites and other features combining updated form and function.
- **Savable Spaces** – At any time, you can save the 3-D arrangement of the Web pages you are browsing, and return to the same spot another day.

SpaceTime is now available for download at [www.spacetime.com](http://www.spacetime.com). The optimal system for running SpaceTime is on Windows 2000, XP, Vista, with at least 512 MB of RAM and 128 MB of video RAM.

**About SpaceTime**

SpaceTime has innovated its proprietary 3-D technology to make surfing the Web a multi-dimensional and visually rich experience. The SpaceTime application allows anyone to navigate the Web in a 3-D environment as they browse, search and shop using Google, Yahoo!, Flickr, eBay and more. SpaceTime is based in New York.
